EXPERIENCE

Senior Systems Engineer (Enterprise Systems Engineer)

January 2019 -

Ringling College of Art and Design • https://www.ringling.edu/

- Architected, deployed, and managed a robust enterprise virtualization environment based on VMware vCenter/ESXi and Hyper-cor Infrastructure (Cisco HyperFlex).
- Led the deployment of Pure Storage SAN arrays and administered hardware across Cisco UCS blade and Dell PowerEdge fleets.
- Designed and maintain CI/CD pipelines using Git, Ansible, and GitHub Actions for automated deployment of macOS configurations, V templates, and infrastructure provisioning across enterprise environments.
- Spearheaded Identity and Access Management (IAM) solutions using Okta Workforce Identity Cloud, developing Okta Workflow contributing to complex SSO integrations.
- Implemented automated account provisioning integrating **Okta** with **Workday HCM**, enabling seamless onboarding workflows for both stude employees while maintaining security compliance and reducing manual provisioning overhead.
- Enhanced organizational security posture by managing and troubleshooting **Palo Alto firewall** rules, administering the **Graylog** log mana solution, and providing system hardening expertise.
- Architected serverless **AWS Lambda** functions integrated with **Signalwire telephony** to handle **Okta MFA** voice authentication, with aut deployments managed through **GitHub Actions** workflows for continuous integration and delivery.
- Orchestrate automated deployment pipelines for **3,000+ macOS devices** using **Jamf Pro** and **Munki** with **Git-based workflows**, enabling con integration of software packages and configuration management through **Bash/Python** automation scripts.
- Maintain enterprise-grade **CI/CD workflows** with automated testing, staged deployments, and rollback capabilities, reducing deployment errors l and enabling rapid iteration cycles for infrastructure updates.
- Managed critical campus infrastructure, including **VMware Horizon (VDI)**, **Genetec Security Center** (Cameras/Door Access), **eduro** networking, and telephony systems (**Signalwire/Asterisk**).
- Managed the full certificate lifecycle for internal and external services (**SSL/Client/Code-Sign**) using InCommon/Sectigo, including key mana and team mentorship.

Systems Engineer/Team Lead

March 2018 - Januar

SouthTech Solutions • https://www.southtech.com

- Provided technical leadership and mentorship to 7-member support team, establishing daily performance goals and escalation procedures
- Served as senior escalation resource for complex Mac, Windows, and network infrastructure issues across managed service provider client base
- Deployed and configured on-premise infrastructure including backup/disaster recovery systems, firewalls, routers, switches, and access points
- Administered enterprise networking equipment including SonicWall firewalls and managed switches, configuring DHCP, DNS, and NAS service
- Coordinated vendor relationships for hardware RMAs, service escalations, and resource scheduling to ensure client SLA compliance
- Designed implementation strategies for complex multi-site client deployments and provided technical project leadership

Systems Support Specialist

February 2017 - Marc

SouthTech Solutions • https://www.southtech.com

- · Implemented company-wide productivity solutions including Microsoft Teams deployment and user adoption strategies
- · Resolved complex telephony issues for Star2Star VoIP systems, providing both technical support and user training
- Designed and implemented call center platforms for clients, including configuration, deployment, and staff training programs
- · Managed user onboarding and offboarding processes, ensuring security compliance and access provisioning
- · Created comprehensive knowledge base documentation, becoming top contributor of technical articles for internal staff reference

Field Support Specialist

July 2015 - Januar

DePaul University • https://www.depaul.edu

- Developed customized macOS and Windows deployment images ensuring compliance with university security standards and application require
- Resolved Tier II hardware, software, networking, and IP telephony issues using enterprise tools including LogMeIn Rescue, Apple Remote D
 Microsoft SCCM, and Active Directory
- · Created bash and Python automation scripts for system diagnostics, troubleshooting workflows, and deployment processes
- Diagnosed and documented complex technical issues across authentication systems, network infrastructure, and telephony platforms
- · Recruited, trained, and provided technical mentorship to new team members while maintaining operational excellence

DePaul University • https://www.depaul.edu

- · Developed in-house network storage access application for Mac computers, improving user experience and reducing support tickets
- · Collaborated on a team to develop Single Sign-On (RADIUS) solution for wireless authentication, contributing to architecture design and testing
- · Provided mobile device support across iOS, Android, and BlackBerry platforms for Exchange Server connectivity and university applications
- · Delivered escalation support for faculty, staff, and students while maintaining service level agreements through PeopleSoft CRM system

Help Desk Student Analyst

January 2012 – Jur

DePaul University • https://www.depaul.edu

- Managed ticket creation, maintenance, and escalation via PeopleSoft CRM system to meet service level agreements
- Provided first-level technical support for university community while developing foundational IT support skills

EDUCATION

B.S. in Network Technologies

DePaul University

PRESENTATIONS

Deploying Jamf + Munki in a Lab Environment

Penn State MacAdmins Conference

Demonstrated practical deployment strategies for Mac management solutions to 200+ IT professionals, covering integration best practices and real implementation scenarios

SKILLS

Languages: Bash/ZSH, Python, Cisco IOS, Powershell

Operating Systems: macOS, Linux, Windows Server

Software: Okta Workforce Identity Cloud, Meraki Systems Manager, ConnectWise, Jamf Pro, Munki, Ansible, VMware

vCenter/ESXi, Cisco HyperFlex, Pure Storage, Palo Alto Firewalls, Graylog, AWS, Signalwire/Asterisk, Genetec Secur

Center, VMware Horizon (VDI)
